

Fog

Qingyun Li

May 21, 2018

As we all know, fog is a natural weather phenomenon. Especially recent yeays, due to the distruction of the environment, this phenomenon is more and more serious. The buildings is higher and the air isn't free, all this reasons lead to the formation of the fog. And our common life has been effected seriously.

Today we discuss the concentration level of fog, we can learn it explicitly at the table 1.

Table 1: Concentration level of fog	
Level	Horizontal Visibility Distence
mist	1000-10000
fog	500-1000
heavy fog	200-500
smoke fog	50-200
strong fog	<50
