

Kaggle's Iceberg Classifier Challenge

Qingyun Li

April 25, 2018

David Austin, who, with his teammate, took home 1st place in Kaggle's Iceberg Classify Challenge. Their winning solution can be practically used to allow safer navigation for ships and boats across hazardous waters, resulting in less damages to ships and cargo, and most importantly, reduce accidents, injuries, and deaths. He said that it would be particularly difficult for a human to accurately predict the classifications, it would serve as a great test to see what computer vision and deep learning could do.
